

FORMULA FIVE® Clean 'N Glaze for Gelcoat Surfaces

Description

FORMULA FIVE® Clean 'N Glaze is a mild polishing paste that contains a very fine polishing agent and small amounts of a special silicone. It extends the life of gelcoat surfaces through gentle cleaning and removes residues/surface deposits. Fine scratch marks and surface opacities are removed and at the same time a long-lasting high gloss is created.

FORMULA FIVE® Clean 'N Glaze can be used on all top layers of polyester and epoxy resin. It is also suitable for refurbishing water sports equipment, buses, trains, caravans/mobiles, shower trays, washbasins and all objects with a gelcoat surface.

Preparation of the surface

The surface should be dry, clean and free of grease before treatment

. FORMULA FIVE® Clean 'N Glaze is not recommended for use with highly porous surfaces such as plaster or wood. It is not suitable for car paints or transparent plastic. For heavily oxidized surfaces, sanding with wet sandpaper with a grit of 400 - 800 or finer may first be necessary to protect the surface from pre-treatment according to Formula Five Clean 'N Glaze's application.

Instructions for use

Use in a well-ventilated area with appropriate personal protection, shake well before use and do not apply in direct sunlight. Using a clean dry cloth or applicator pad and circular motions, apply a thin, even layer of FORMULA FIVE® Clean 'N Glaze to the surface of the mold. For hand polishing, work in pieces of 0.25 - 0.5 square meters. For larger areas

a polishing machine can help. Polish until the surface is shiny and dry, repeating if necessary. Working with a polishing machine reduces the work, but there is a risk of burning the surface or over-polishing edges. Always keep the polishing machine moving until the surface is dry and shiny. Any remaining dust or polish residue can be blown off with air or removed with water can be rinsed off.

After treatment with FORMULA FIVE® Clean 'N Glaze, a final application of a classic boat wax can achieve a longer-lasting result, but in practice it has been shown that FORMULA FIVE® Clean 'N Glaze usually does not require any further post-treatment with such products. Due to the silicone content in FORMULA FIVE® Clean 'N Glaze ensures very good protection of the gelcoat.

Regular use of FORMULA FIVE® Clean 'N Glaze in conjunction with the high-quality boat wax can greatly extend the life of the gelcoat surface.

- Contains silicone
- Resistant up to approx. 100 °C
- Consumption 10-20g/m²
